

REMARKS

Claims 7-11 are in the case. Amendments have been made in the4 specification to correct minor typographical errors and to provide text describing structures illustrated in the original drawings. No new matter has been added. Corrected drawings showing new reference numerals 12', 14', 18 and 19 are submitted for the Examiner's review and entry into the file. One set of the drawings shows the amendments in red, the other set is in proper form.

Applicant believes new claims 7-11 define a novel and nonobvious advance in the art. None of the art of record illustrates an appliance mounting apparatus with opposing concave sections or opposing concave sections or opposing channels for receiving locking members in combination with a chamber having an aperture that accommodates electrical power or data lines.

The invention provides a remarkably simple, low profile and inexpensive means for mounting flat panel video display appliances, and it is not suggested in any of the known prior art. An early allowance is requested.
